

# RP 3737-6

Monoflo's high-pressure injection molded pallet systems are engineered to be more durable yet lighter, saving you money and lasting longer than competitive products. Our versatile line of pallets will perform brilliantly in any specific application.

The Monoflo RP 3737-6 is a high-pressure injection molded pallet that features a two-piece, heat welded design resulting in best in class strength to weight ratios. This pallet also features a patent pending crumple zone in the corner feet which absorbs greater impact than competitive pallets. All this leads to a stronger pallet, with a longer usable life. It is ideal in automated systems, high racking warehouses and outside supply chain loops.

It also features:

- > Standard footprint of 37" x 37" for food and beverage applications
- > Two-piece welded design offers strength and durability with a low tare weight
- > Superior design in corner and foot areas increases durability
- > Manufactured using FDA approved materials
- > Sustainable solution—100% recyclable with no metal

## RP 3737-6 Specifications

Model	Entry	Material	Outside Dimensions (inches)			Pallet Weight	Static Load (lbs)	Dynamic Load (lbs)	Stack Qty	Trailer Qty 53'
			L	W	H					
RP 3737-6	4-Way	PE	37.0	37.0	6.0	37.6	30,000	4,000	17	544

Static and Dynamic Load ratings are affected by type and distribution of loads, contact your Monoflo Sales Rep to discuss your application.
