FC 2416-11

Monoflo's high-pressure injection molded food containers are engineered to perform in demanding situations. They are easy to clean, secure and durable—lasting longer than competitive products, saving our customers money.

The Monoflo FC 2416-11 is ideal for meat and poultry applications. The extra smooth interior walls are designed to mitigate bacteria growth and larger corner radii—and optional drain holes—make washing for re-use easy. This container is available in standard and heavy-duty weights and includes detached, snap-on lids with a notched pattern for convenient, secure cross-stacking.

It also features:

- > FDA approved materials
- > Compatible with existing products
- > Nestable design offers 4.8:1 ratio, saving storage space and shipping costs
- > Large corner radii and channels for easy washing
- > High-pressure injection molded
- > Secure tie locking holes
- > Available with optional labeling, bar coding and additional identifiers
- > Sustainable solution—100% recyclable
